

Not all Landscape Architects & Urban Designers are the same.

With Meinhardt you get more.
You get new ideas that work.
It's what we call **practical imagination.**

From Planning to Design to Implementation

Meinhardt's integrated multi-disciplinary team – Landscape Architects, Urban Designers, Planners and Engineers, means you get:

- Pragmatism and creativity
- A streamlined and efficient process
- A cost-effective solution
- A better coordinated and holistic outcome

Strategic and Statutory Planning

Landscape and Urban Design provides vital input to your development applications, precinct structure plans, urban design frameworks and feasibility studies. Our skill in undertaking site analysis, landscape character assessment, vegetation assessment and understanding of natural and urban processes provides increased value to your project and builds support with authorities, stakeholders and the community.

Urban Development

Developing new communities starts with an appreciation of site and place. Our Landscape Architects and Urban Designers work alongside our team of civil and infrastructure engineers, to provide you with practical yet creative design solutions including master plans for new communities, layouts of streets, wetlands, parks, housing allotments, town centres, schools sites and business precincts. In-house landscape design and documentation seamlessly supports the development of engineering solutions and includes undertaking streetscape plans, water sensitive urban design, parks and creek corridors and rehabilitation plans.

Specialised Engineering Services

Our ability to utilize the in-house services of specialised engineers means we provide you with more streamlined and coordinated solutions. This includes structural input and computations for landscape structures, footings and green roofs, hydraulic performance of water sensitive urban design elements, lighting design for streets, parks and public realm, green wall façade design, contamination and environmental assessment services.

“The addition of Landscape Architecture and Urban Design to our service offer recognizes their importance in the planning and land development sectors. They will complement our existing capabilities and provide a more holistic service. Our team's focus is to provide the best possible service to our clients and deliver creative imaginative solutions that are practical and contribute to their bottom line.”

Dean Thornton, Manager Urban and Landscape Design

Our design services include:

- Urban design frameworks and structure plans,
- Master plans for Greenfield and brownfield developments,
- Feasibility Studies,
- Urban design associated with transport infrastructure,
- Public realm design, including streetscapes, parks, promenades and building settings,
- Wetland design and Water Sensitive Urban Design,
- Landscape Master Planning
